

For this project, we will require the following data:

1. Data on the 5 boroughs as well as the neighborhoods that exist in each borough. The latitude and longitude coordinates of each neighborhood are required as well. This information will be obtained from https://cocl.us/new_york_dataset.
 2. Detailed information on Burger joints in New York City. This will be obtained from Foursquare. Foursquare will be able to provide us with detailed information of all the burger joints in New York such as location, ratings, likes, reviews, tips, etc.
- By merging both sources of information we will be able to obtain the information required to solve the business problem/questions.
